Continuation of 11. does NOT place the application in condition for allowance because: With respect to the traversal of independent claim 1, the applicant argues that Yamanaka et al. (US 5,983,247) does not suggest a storing a plurality of browser graphics, and a selection of a browser graphic corresponding to an aspect ratio from among the plurality of browser graphics. The applicant argues that Yamanaka rather suggests converting a graphic image to have a proper aspect ratio and teaches a method whereby one converted image is generated for each received image to have a specific aspect ratio according to conversion information, i.e. a plurality of converted images, each having a differenct aspect ratio, is not generated for a received image. The applicant argues that, instead, one converted image, having a specific aspect ratio, is generated for a received image. The examiner respectfully disagrees. As has been stated in previous office actions, Yamanaka discloses an area storing unit for including a PLURALITY of storage areas each of which is suitable for the size of the second display (column 2, lines 5-7). On it's face, this statement in Yamanaka could either indicate 1) a plurality of storage areas for receiving a plurality of images, each image received from one document and each image converted to the same aspect ratio different from the first aspect ratio, or 2) a plurality of storage areas each for receiving an image which has been converted to multiple different aspect ratios. Yamanaka discloses a space judging element for judging for each of the display image elements whether a space of a first storage area among the plurality of storage areas is enough to store the one of the display image elements based on a corresponding piece of conversion information (column 2, lines 14-19) and if the display image element does not fit into the first storage area, then writing the dsiplay image element into a second storage area (column 2, lines 24-28). The disclosure of Yamanaka makes it clear that there are more than one storage area for receiving the same image converted to different aspect ratios. Therefore, the examiner maintains the rejection of claim 1. The examiner, therefore, believes that the arguments made by the applicant have been sufficiently addressed by the final office action.
